Top Course Features

SUPPORT UNTIL YOU GET PLACED

The candidate will begin attending interviews with various IT companies. Some candidates are victorious on their first try, while others take more chances. Now I want the candidate to provide me with their interview questions. I will develop solutions to these questions. Same procedure will be followed until placement is achieved! The validity term is one year from the date of purchase.

INDIVIDUALIZED LEARNING STRATEGY

Each candidate has a unique history. From a BPO, KPO, or QA manual testing.

I will have a detailed conversation with the candidate to determine their level of experience in areas such as programming skills, domain knowledge, and communication skills.

Accordingly, a personalized learning strategy plan will be created for them.

Note: There will be a one-on-one talk in zoom meeting. Every piece of data and information will be protected.

Top Course Features

LIVE TRAINING ON THE PROJECT FRAMEWORK

Every job interview begins with the question, "What automation framework does your project utilize?" Accordingly, the candidate will undergo training on the Hybrid Selenium Automation Framework via a live zoom session. It will be similar to those used in IT companies. Even if the individual has no prior expertise with automation, they will be qualified after completing this program. Now, they will find it simple to work on any type of automation project and breeze through the interview.

ONE-ON-ONE SUPPORT

As a beginner in coding, you need not worry about program setup. In a zoom meeting, I will personally configure all the software.

In addition, whenever you face any technical issues or errors, I will connect with you via Zoom meeting to resolve the issue. In addition, we have a WhatsApp group for addressing technical issues.

Top Course Features

RESUME PREPARATION

Based on the outcomes of the assignments, the three stages of framework implementation, the MCQ score, and previous experience. The resume will be prepared accordingly. Whether to apply for the automation jobs solely as an automation candidate (to obtain a high compensation) or with both automation and manual testing experience (To avoid advanced automation interview questions)

MOCK INTERVIEW

Based on the completion of the resume, the candidate will be guided on how to attend the interview. Since the interview questions have already been posted, those will be utilized in the mock interview.

We'll use video conferencing to conduct the mock interview. The candidate will receive feedback at the end so they can avoid repeating the same mistakes in future interviews.

ALL COURSE FEATURES

- **Individualized Learning Strategy**
- **One on One Support for software installation**
- **One on One Support for issue fixing**
- **Code Review as per Industrial Standards**
- **Live Training on the Project Framework**
