Core Track Roadmap : Module 1 to 8

Core Track Features

- Pay Once, Attend Twice
- Will Make you Code
- Code Review as per Industrial Standards
- One-On-One Support
- Live Training on the Project Framework
- Interview Questions and Answers Discussion

Course
Completion
Certificate

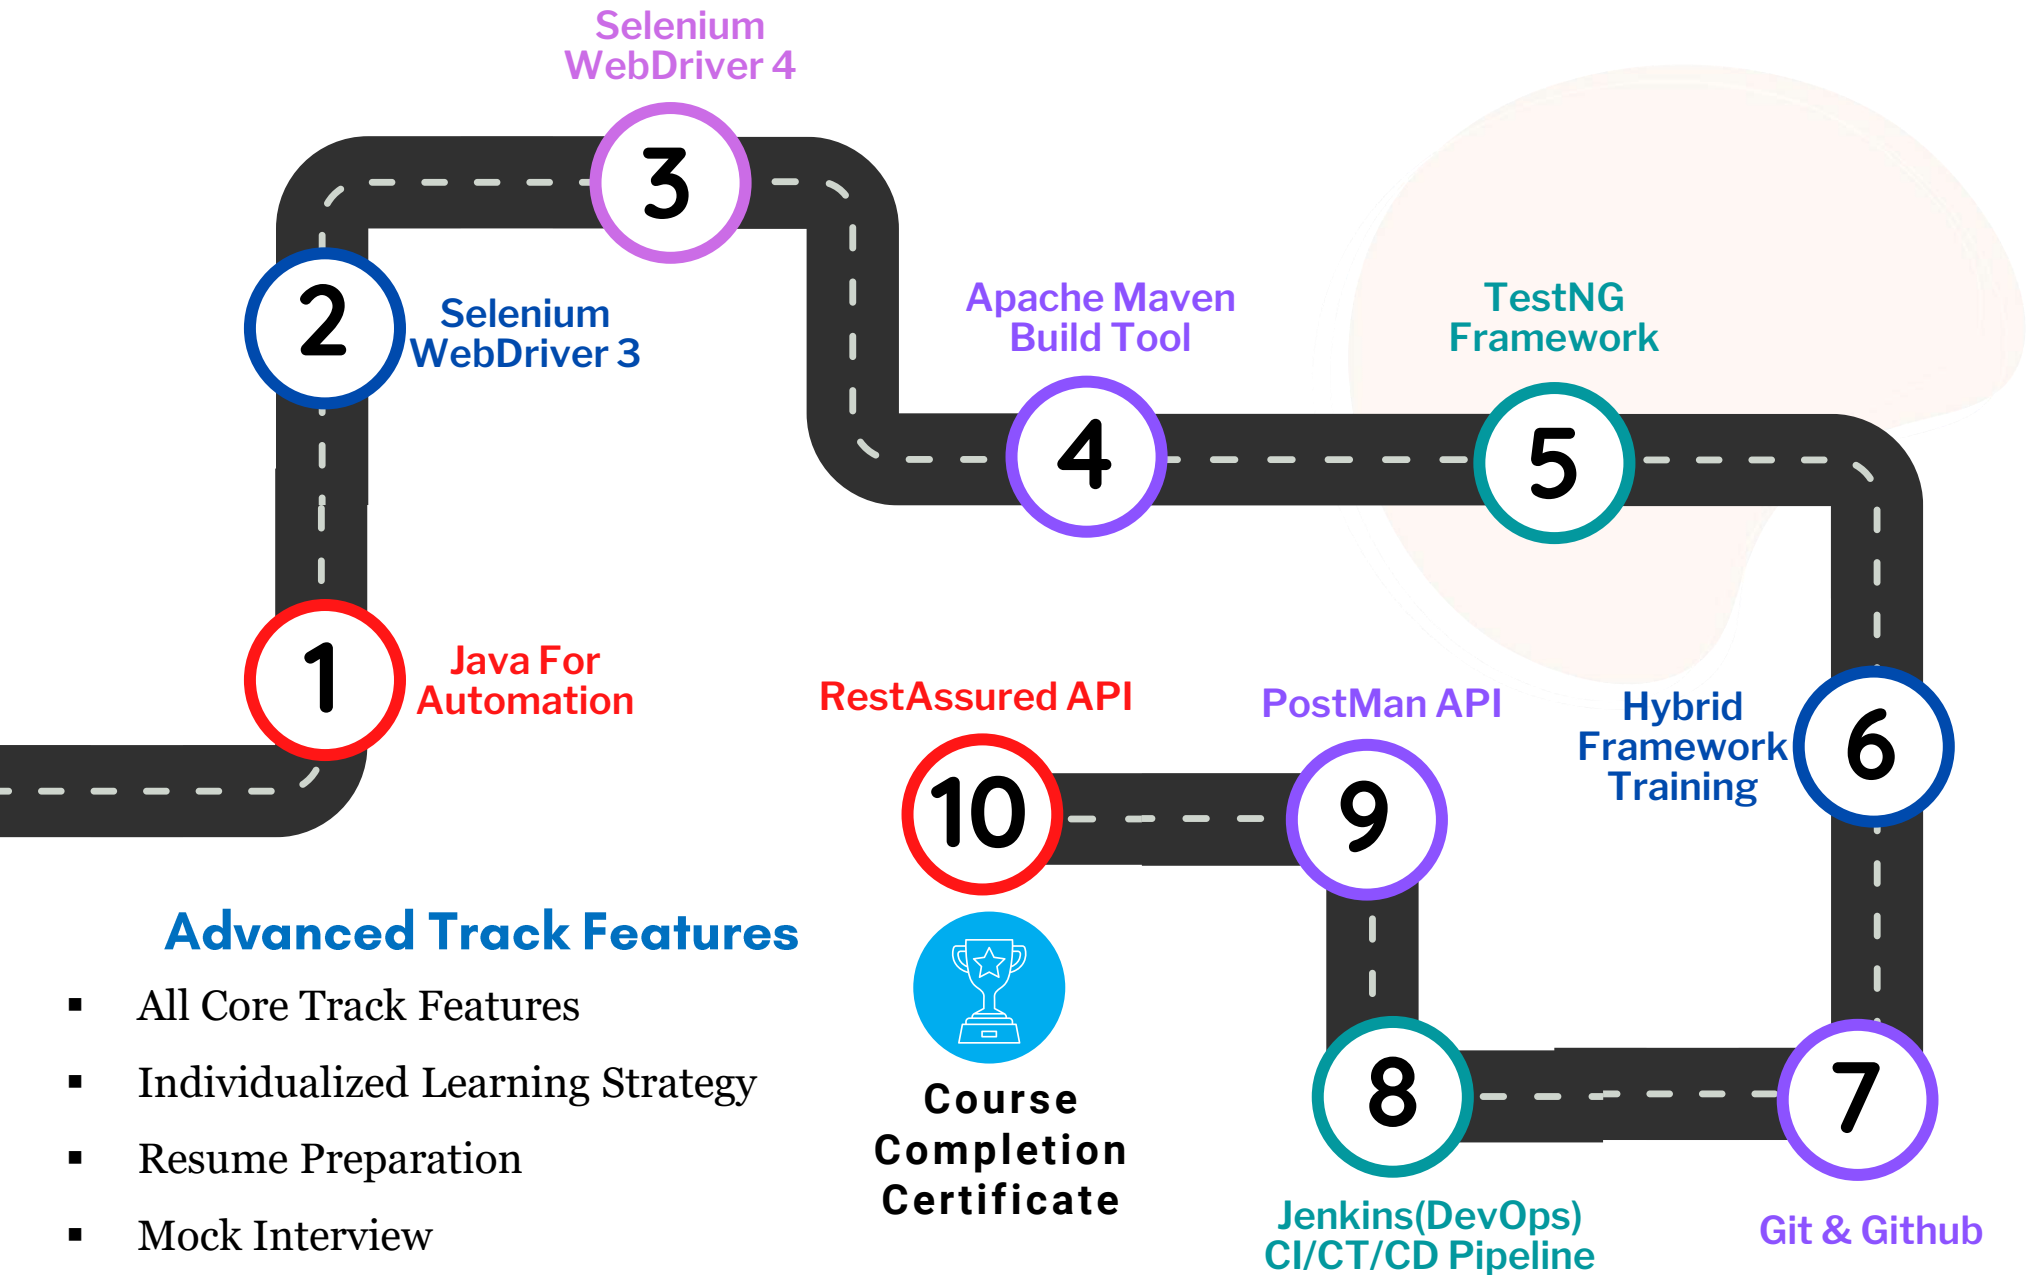

Who Should Enroll in the Core Track?

- ✓ **Functional Tester**
- ✓ **Automation Tester with UFT/Other Automation tools skills**
- ✓ **Onsite Associate**
- ✓ **Learning for Knowledge or Upskilling**

Objective:

“Selenium Automation Projects within Organization”

Advanced Track Roadmap : Module 1 to 10

Advanced Track Features

- All Core Track Features
- Individualized Learning Strategy
- Resume Preparation
- Mock Interview
- Support Until You Get Placed

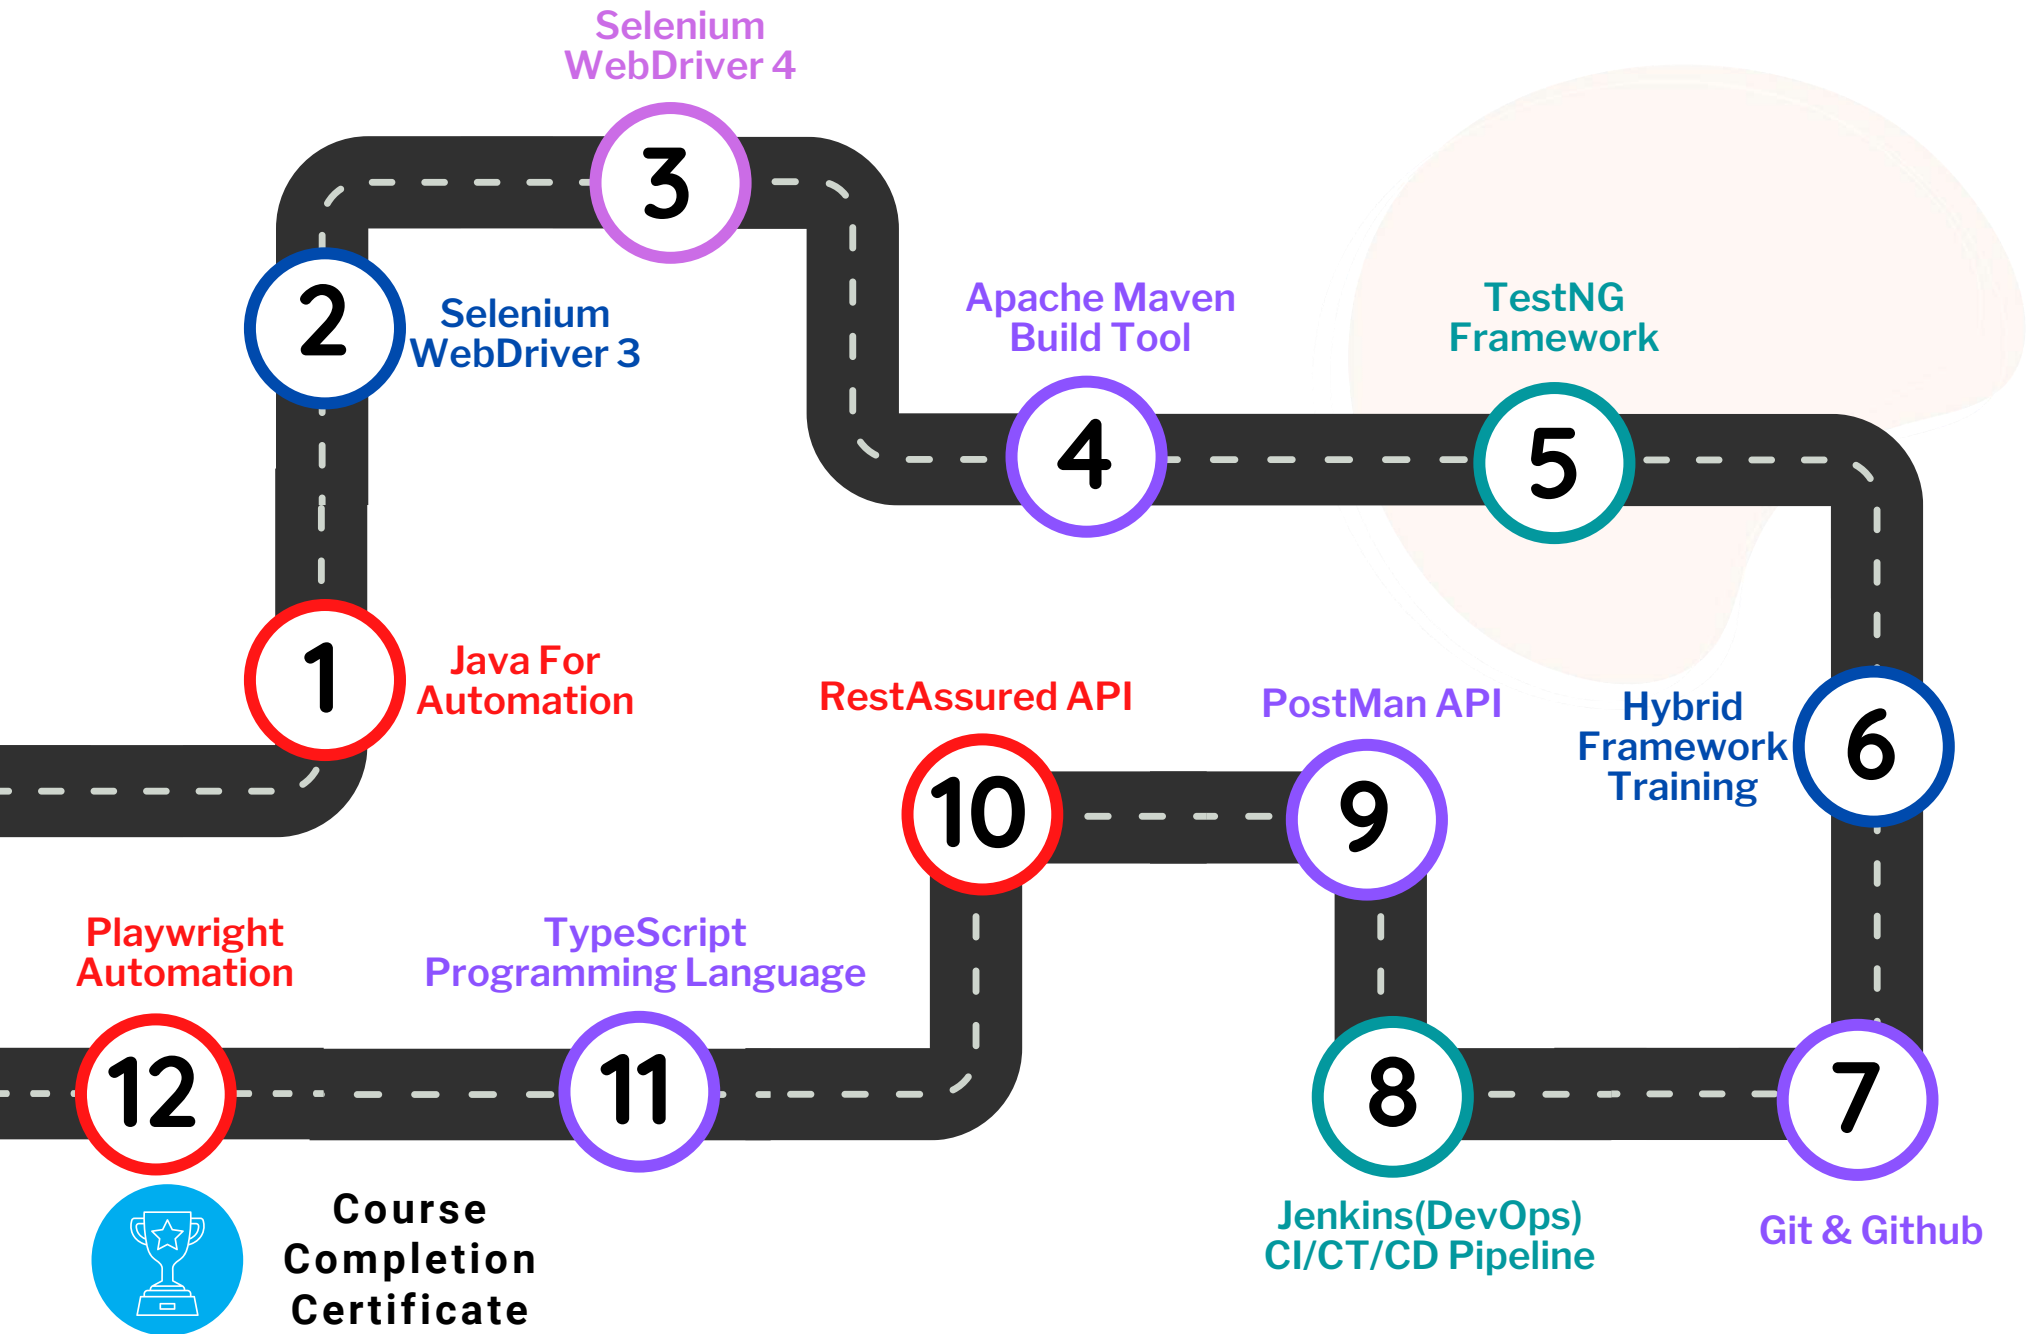

Who Should Enroll in the Advanced Track?

- ✓ **College students exploring IT**
- ✓ **Freshers starting an IT career**
- ✓ **Transitioning from non-IT to IT**
- ✓ **Returning after a career break**

Objective:

“QA Automation Opening in the External Market”

Full-Stack Track Roadmap : Module 1 to 12

Full-Stack Course Features

- ✓ **All the Core Track Features**
- ✓ **All the Advanced Track Features**
- ✓ **Free Self paced Video Courses**
 - **Manual Testing (Functional Testing)**
 - **Agile**
 - **JIRA**
 - **Cypress Automation Tool (GUI and API)**
 - **Project Management (QA Lead and QA Managers Topics)**

Who Should Enroll in the Full-Stack Track?

- ✓ **QA professional with 5 to 12+ years of experience**
- ✓ **Aiming for SDET (Software Development Engineer in Test)**
- ✓ **Aiming for Automation Architect**

Objective:

“Targeting a salary range of ₹25-40+ LPA”

- **Mode : Using Zoom Meeting**
- **Recordings will be provided**
- **Materials such as programs, slides, and interview questions will be shared**
- **Course completion certificate**

Top 10 Course Benefits

Top Course Features

INDIVIDUALIZED LEARNING STRATEGY

Each candidate has a unique history. From a BPO, KPO, or QA manual testing.

I will have a detailed conversation with the candidate to determine their level of experience in areas such as programming skills, domain knowledge, and communication skills. Accordingly, a personalized learning strategy plan will be created for them.

Note: There will be a one-on-one talk in zoom meeting. Every piece of data and information will be protected.

PAY ONCE, LEARN TWICE

Using data from the previous 50+ training batches. Many of the students are unable to complete the training due to personal life commitments, existing project work, and medical reasons. So to make them convenient, training sessions can be attended twice. It is also ideal for reinforcing their understanding, revisiting complex topics, or obtaining a refresher in the future, all without any additional cost.

Top Course Features

WILL MAKE YOU CODE

Without any IT experience or programming background, anyone can learn QA automation tools with the right guidance and hard work. Our course is designed so that anyone can start learn automation skills, even if they have never programmed before.

Beginning from scratch and using simple examples, all the topics are taught.

ONE-ON-ONE SUPPORT

As a newbie to coding, you no need to worry about technical issues or errors.

The issue has to be communicated to me via WhatsApp.

It will be resolved as early as possible. For more complicated issues.

I will schedule a Zoom meeting with you and resolve the issue myself.

Top Course Features

LIVE TRAINING ON THE PROJECT FRAMEWORK

Every job interview begins with the question, "What automation framework does your project utilize?"

Accordingly, the candidate will undergo training on the Hybrid Selenium Automation Framework. It will be similar to those used in IT companies. Even if the individual has no prior expertise with automation, they will be qualified after completing this program. Now, they will find it simple to work on any type of automation project and breeze through the interview.

CODE REVIEW AS PER INDUSTRIAL STANDARDS

Module-wise, more than 50+ assignments are given. Every assignment will be reviewed in line with the checklist used in the IT industry (Automation Team). The candidates will get feedback that they can use to make their projects better.

This process will help the candidate in coding as experienced resources after they join the automation project.

Top Course Features

RESUME PREPARATION

Based on the results of the assignments, MCQ score, and past experience.

Accordingly, the resume will be prepared.

Whether to apply for the automation jobs entirely as an automation candidate (to receive a high salary) or combined experience with manual testing (to avoid advanced automation questions during interview)

INTERVIEW QUESTIONS AND ANSWERS DISCUSSION

The key to winning the interview is providing appropriate answers to the questions.

Our interview questions and answers are carefully selected to reflect industry trends, ensuring you are well-prepared. At end of each session, the interview questions are discussed.

Thus, there is no need to spend more time preparing for the interview separately.

Top Course Features

MOCK INTERVIEW

Based on the completion of the resume, the candidate will be guided on how to attend the interview.

Since the interview questions have already discussed during session, those will be utilized in the mock interview.

We'll use video conferencing to conduct the mock interview.

The candidate will receive feedback at the end so they can avoid repeating the same mistakes in future interviews.

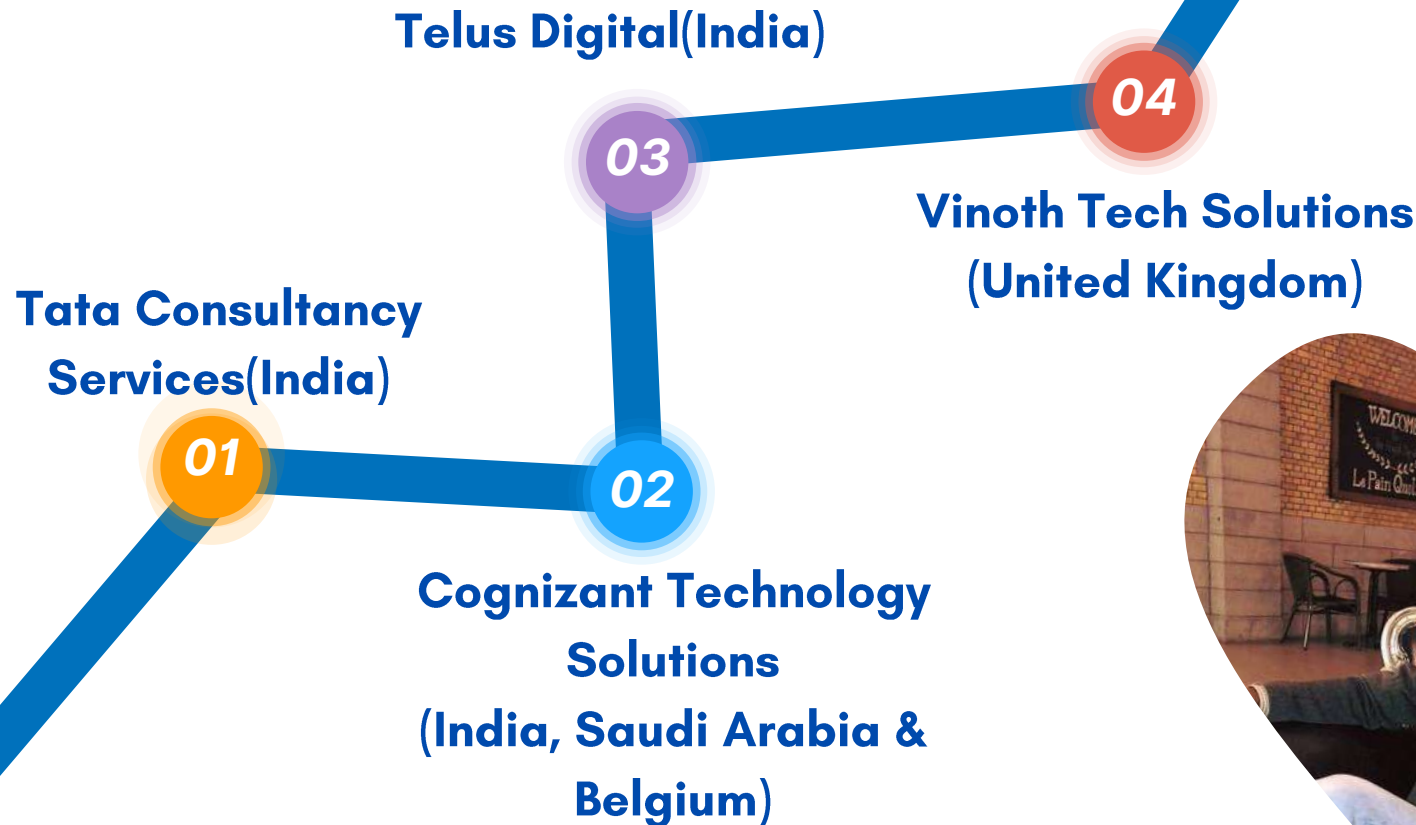

SUPPORT UNTIL YOU GET PLACED

The candidate will begin attending interviews with various IT companies. Some candidates are victorious on their first try, while others take more chances. Now I want the candidate to provide me with their interview questions. I will develop solutions to these questions. Same procedure will be followed until placement is achieved! The validity term is one year from the date of purchase.

About Instructor

- 15 + Years of IT Experience
- 1,50,000 + Students at Udemy
