AI-Assisted Playwright Test Automation

V TECH SOLUTIONS

What this module focuses on

⚙️ Practical AI usage for testers

📈 Improved productivity & test quality

🤝 Smarter automation (AI as a co-pilot)

What you will learn in this module

✅ Learn how Generative AI assists Playwright automation in real projects

✅ Use AI prompts to generate Playwright tests and Page Object models

✅ Speed up scripting using GitHub Copilot and AI suggestions

✅ Analyze failures and flaky tests with AI-assisted debugging

✅ Get an intro to MCP & Playwright Test Agents (concept + demo)

✅ End-to-end demo: Requirement → Prompt → Playwright Test Execution

Course Details

- **Training Starts On : 1st February 2026(Sunday)**

- **Classes will be held every Saturday and Sunday**

- **Timings :**

  6:00–8:30 PM IST | 12:30–3:00 PM UK

  1:30–4:00 PM CET | 7:30–10:00 AM ET

- **Mode: Live online via Zoom**

- **Recordings will be provided (Lifetime Access)**

- **Materials such as programs, slides, and interview questions will be shared**

- **Course Completion Certificate**

What Makes This Program Different

V TECH SOLUTIONS

Step 1
Pay Once, Learn Twice

Step 2
Individualized Learning Strategy

Step 3
Hands-On Coding Focus

Step 6
Interview Questions and Answers Discussion

Step 5
Code Review Aligned with Industry Standards

Step 4
One-On-One Support

Step 7
Resume Preparation

Step 8
Mock Interview

Step 9
Placement Support Until You Succeed

Course Completion Certificate

PAY ONCE, LEARN TWICE

Based on observations from previous training batches, certain participants may be unable to complete the training as scheduled owing to personal commitments, professional responsibilities, or medical circumstances.

To support flexibility and ensure no learning gaps, participants are allowed to attend the training sessions twice. This approach also helps learners reinforce their understanding, revisit complex concepts, and refresh their knowledge in the future — at no additional cost.

Note: The second attempt must be completed in the immediately next available batch.

INDIVIDUALIZED LEARNING STRATEGY

Each candidate comes with a unique professional background, including experience in BPO, KPO, QA manual testing, application support, business analysis, or entry-level software roles.

I will conduct a detailed discussion with each candidate to assess their experience level in key areas such as programming skills, domain knowledge, and communication skills. Based on this evaluation, a personalized learning strategy will be created to suit their individual needs.

Note: The discussion will be conducted as a one-on-one Zoom meeting or WhatsApp Call. All shared data and personal information will be kept strictly confidential.

Top Course Features

HANDS-ON CODING FOCUS

Even without prior IT experience or programming knowledge, anyone can learn QA automation tools with the right guidance and consistent effort. This course is designed to help learners begin their automation journey from the ground up, even if they have never written code before.

All topics are taught from scratch, using simple, easy-to-understand examples, ensuring a smooth and confidence-building learning experience.

ONE-ON-ONE SUPPORT

As a beginner in coding, there is no need to worry about technical issues or errors during the learning process.

Any issues can be communicated to me directly via WhatsApp, and they will be addressed as early as possible.
For more complex issues, I will schedule a one-on-one Zoom meeting and resolve them personally.

Top Course Features

CODE REVIEWS ALIGNED WITH INDUSTRY STANDARDS

Module-wise assignments will be provided throughout the course. Each assignment will be reviewed against an industry-standard checklist commonly used by IT automation teams.

Candidates will receive detailed, actionable feedback that can be applied to improve the quality of their work and projects. This structured review process helps candidates develop coding practices and problem-solving approaches aligned with those of experienced automation professionals, preparing them to contribute effectively once they join an automation project.

INTERVIEW QUESTIONS AND ANSWERS DISCUSSION

The key to succeeding in interviews is providing clear and appropriate answers to the questions asked. Our interview questions and answers are carefully curated to reflect current industry trends, ensuring you are well prepared for real-world interview scenarios.

Top Course Features

RESUME PREPARATION

A guided approach will be followed to prepare the candidate's resume in line with industry expectations and best practices, ensuring it truthfully represents their capabilities, experience level, and career direction.

MOCK INTERVIEW

Once the resume is finalized, the candidate will be guided on how to approach and attend interviews effectively. Since interview questions are already discussed during the sessions, the same will be used during the mock interview.

Mock interviews will be conducted via video conferencing, and the candidate will receive detailed feedback at the end of session to help identify areas for improvement and avoid repeating the same mistakes in future interviews.

PLACEMENT SUPPORT UNTIL YOU SUCCEED

The candidate will begin attending interviews with various IT companies. While some candidates succeed in their first attempt, others may require multiple interview opportunities.
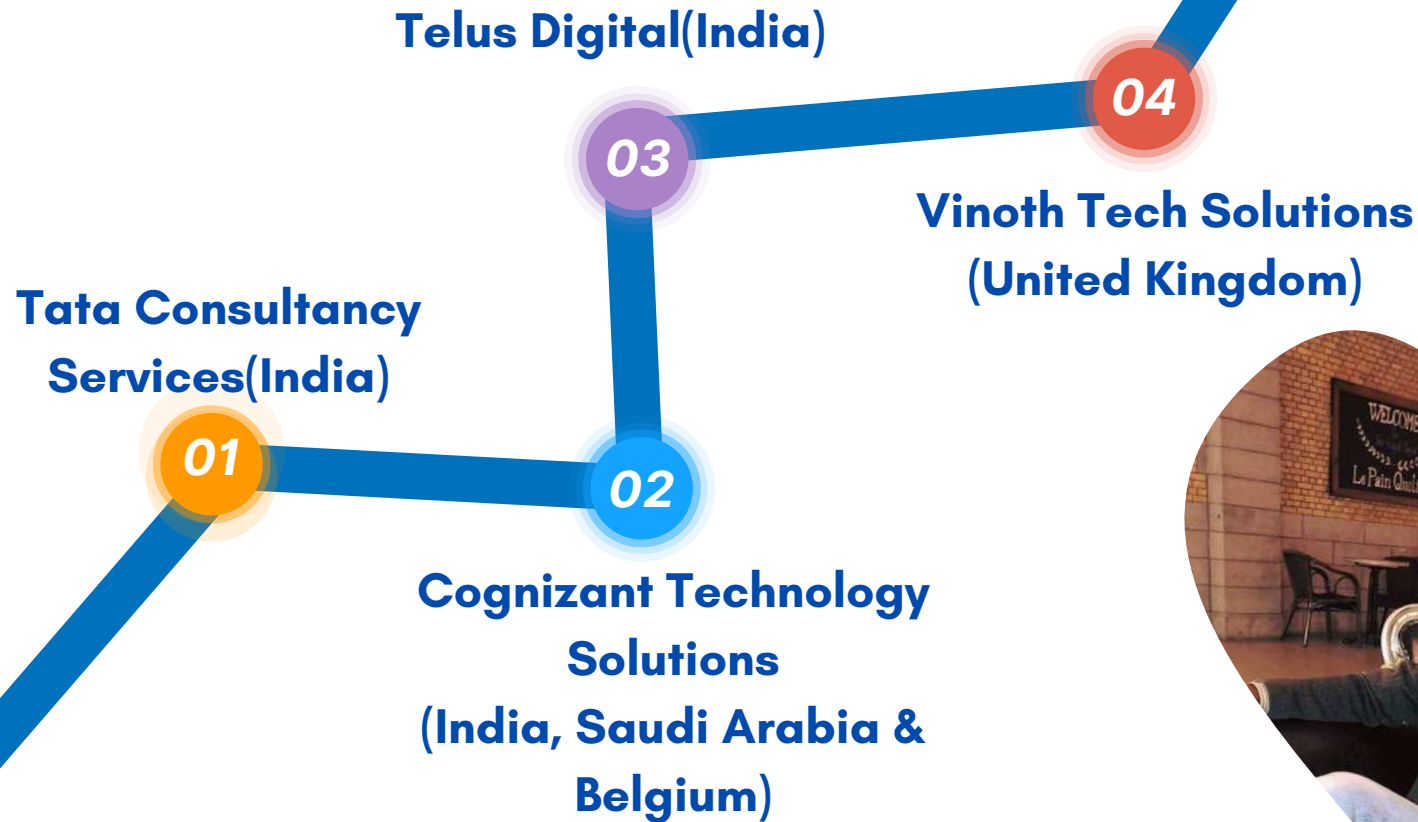

Candidates are expected to share the interview questions they encounter. Based on these, I will provide guidance and solutions to help them improve their responses. This process will continue until placement is achieved.

Note: Placement support is valid for one year from the date of the first training session.
